**RE: BELLMAWR WATERFRONT DEVELOPMENT
RT PROJECT # 70779-113**

Mayor Filipek,

We are pleased to respond to your inquiry regarding the Bellmawr Waterfront Development (BWD) remediation progress.

As you are aware, the remediation of the site has been conducted by Professional Engineers and Licensed Site Remediation Professionals, and in accordance with New Jersey Department of Environmental Protection requirements for Site Remediation, and Landfill Closure. Remediation is close to completion for the entirety of the site. The site is well prepared for re-development, from an environmental standpoint.

The Remediation and Closure Plan for the site is approved by NJDEP, designed to be protective of public and environmental health and safety. Remediation efforts have been largely successful, as data collected from the site since work began shows no significant impacts of concern to Big Timber Creek from the landfill. The volume of wastewater within the landfill has declined significantly; and as LSRP for the site, I have concluded that no significant migration of *leachate* occurs. Additionally, a protective soil cap has been placed on the site, over the top of the landfill, so as to prevent direct contact with landfill materials.

Should there be any further questions, please do not hesitate to call.

Very Truly Yours,

RT ENVIRONMENTAL SERVICES, INC.

Gary R. Brown, P.E., LSRP
President
